

Querying the Semantic Web with SWRL

Martin O'Connor, Samson Tu,
Csongor Nyulas, Amar Das, Mark
Musen

Stanford Medical Informatics, Stanford University

Protégé-OWL

- Widely-used development environment for working with OWL ontologies
- Popular, open source, active mailing list, frequent new releases
- Extensible: many third party plugins developed for it

Figure 4. Respondents' use of ontology editors

ONTOLOGY BROWSER

For Project: ● RuleML2007Demo

Ontologies

- Ontology(<http://www.owl-ontologies.com>)
 - Ontology(<http://swrl.stanford.edu/ontologies/built-ins/3.4/sqwrl.owl>)

swrla	http://swrl.stanford.edu/ontologies/3.3/swrla.owl#

What is SWRL?

- SWRL is an acronym for Semantic Web Rule Language.
- SWRL is intended to be the rule language of the Semantic Web.
- SWRL includes a high-level abstract syntax for Horn-like rules.
- All rules are expressed in terms of OWL concepts (classes, properties, individuals).

Example SWRL Rule: is adult?

Person(?p) ^ hasAge(?p,?age) ^
swrlb:greaterThan(?age,17)
→ Adult(?p)

SWRLTab

- A Protégé-OWL development environment for working with SWRL rules
- Supports editing and execution of rules
- Extension mechanisms to work with third-party rule engines
- Mechanisms for users to define built-in method libraries
- Supports querying of ontologies

SWRL Rules

Enabled	Name	Expression
<input checked="" type="checkbox"/>	Explicit-Mapping-Query	\rightarrow hasViralLoad(?p, ?vload) \wedge swrlor:mapOWLDatatypeProperty(hasViralLoad, 5.7) \rightarrow sqwrl:select(?p, ?vload)
<input type="checkbox"/>	Implicit-Mapping-Query	\rightarrow hasViralLoad(?x, ?y) \rightarrow sqwrl:select(?x, ?y)
<input checked="" type="checkbox"/>	Demo-Query-3	\rightarrow hasViralLoad(?p, ?vload) \rightarrow sqwrl:select(?p, ?vload)
<input checked="" type="checkbox"/>	swrlor:OWLClassMap-Q...	\rightarrow swrlor:OWLClassMap(?swrlor:cmap) \wedge abox:hasValue(?swrlor:cmap, swrlor:hasOWLClass, ?swrlor:owlClass) ...
<input checked="" type="checkbox"/>	swrlor:OWLDatatypePro...	\rightarrow swrlor:OWLDatatypePropertyMap(?swrlor:dpmmap) \wedge abox:hasValue(?swrlor:dpmmap, swrlor:hasOWLProperty, ?sv...
<input checked="" type="checkbox"/>	swrlor:OWLObjectPrope...	\rightarrow swrlor:OWLObjectPropertyMap(?swrlor:opmap) \wedge abox:hasValue(?swrlor:opmap, swrlor:hasOWLProperty, ?swrl...

See <http://protege.cim3.net/cgi-bin/wiki.pl?SWRLJessTab> for SWRLJessTab documentation.

Press the "OWL+SWRL->Jess" button to transfer SWRL rules and relevant OWL knowledge to Jess.
 Press the "Run Jess" button to run the Jess rule engine.
 Press the "Jess->OWL" button to transfer the inferred Jess knowledge to OWL knowledge.

IMPORTANT: A significant limitation of the current bridge is that it does not represent all OWL axioms when transferring knowledge from an OWL ontology to Jess. The exceptions are the basic class, property and individual axioms, such as, for example, rdfs:subClassOf and rdfs:subPropertyOf, and axioms owl:sameAs, owl:differentFrom, owl:allDifferent, owl:equivalentClass, and owl:equivalentProperty. As a result, the Jess inferencing mechanisms do not know about the remaining OWL axioms. To ensure consistency, a reasoner should be run on an OWL knowledge base before SWRL rules and OWL

SWRL and Querying: SQWRL

- SWRL is a rule language, not a query language
- However, a rule antecedent can be viewed as a pattern matching specification, i.e., a query
- With built-ins, language compliant query extensions are possible.
- We have developed a SWRL-based query language called SQWRL

A SQWRL Query

Return all adults in an ontology ordered by age:

```
Person(?p) ^ hasAge(?p, ?age) ^  
swrlb:greaterThan(?age, 17) -> sqwrl:select(?p)  
^ sqwrl:orderBy(?age)
```

SQWRLQueryTab

See <http://protege.cim3.net/cgi-bin/wiki.pl?SQWRLQueryTab> for documentation.

Executing queries in this tab does not modify the ontology.

Select a SQWRL query from the list above and press the 'Run' button.
If the selected query generates a result, the result will appear in a new sub tab.

Run

SWRLTab: <http://protege.cim3.net/cgi-bin/wiki.pl?SWRLTab>

SWRLTab

[WikiHomePage](#) | [RecentChanges](#) | [Page Index](#) [Login \(create account\)](#)

The SWRLTab is an extension to [Protege-OWL](#) that supports editing and execution of [SWRL rules](#). It provides a graphical editor to create and modify SWRL rules in an OWL knowledge base. It also provides extension mechanisms to support the execution of SWRL rules with a variety of rule engines. At present, the [Jess](#) rule engine is supported. (6GX)

The SWRLTab has four main software components: (6GY)

- **SWRL Editor:** The editor supports editing and saving of SWRL rules in an OWL knowledge base. See the [SWRL Editor FAQ](#) for more details. An introduction to the SWRL language can be found [here](#). (6ZI)
- **SWRL Factory:** The factory provides high-level Java APIs that support the creation and modification of SWRL rules in an OWL knowledge base. This API can be used by developers who wish to work with SWRL rules in their applications. See the [SWRL Factory FAQ](#) for more details. (6H0)
- **SWRL Bridge:** The bridge provides the infrastructure necessary to incorporate rule engines into Protege-OWL to execute SWRL rules. See the [SWRL Rule Engine Bridge FAQ](#) for more details. A bridge for the Jess rule engine is provided in the Protege-OWL distribution. A user interface called the [SWRLJessTab](#) is also provided to interact with this bridge. The hope is that bridges for other rule engines will be developed by the Protege-OWL community and than an array of inference mechanism will become available for executing SWRL rules. (6H1)
- **SWRL Built-in Bridge:** [SWRL built-ins](#) are predicates that accept one or more arguments. These predicates can be used in SWRL rules to support the definition of arbitrary user-defined built-ins, which can then be used in rules. The SWRLTab has a subcomponent called the [built-in bridge](#) that provides a mechanism to define Java implementations of SWRL built-ins. These implementations can then be dynamically loaded by the bridge and invoked from a rule engine. (6H2)

Querying XML

- XML built-in library:
<http://protege.cim3.net/cgi-bin/wiki.pl?SWRLTabXMLBuiltIns>
- Example built-in URL specification:
swrlxml:makeXMLDocument(?d,
"http://www.stanford.edu/~sunid/SWRLTest.xml")
- Can query web and file based XML documents using SQWRL
